

# GETTING TOADS OUT OF A HOLE

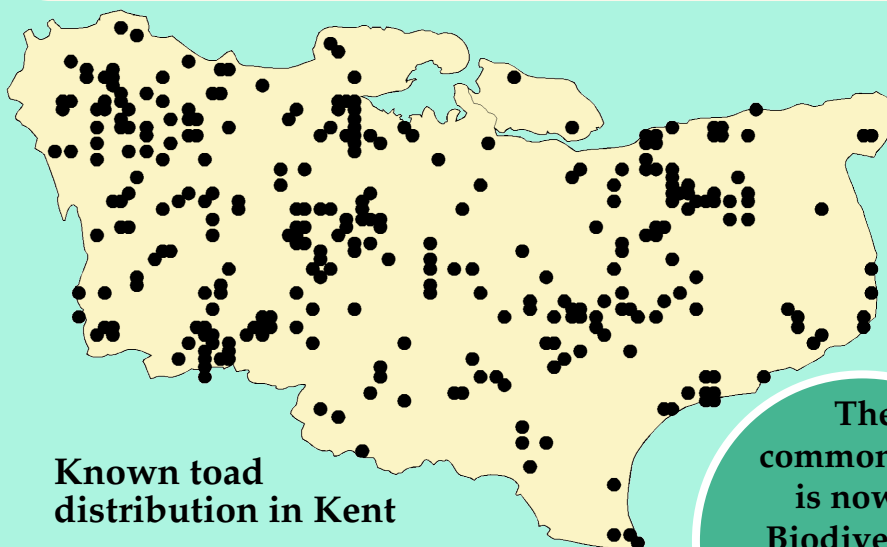

Common toad © Brett Lewis

## KRAG

This new project launched in 2009 by Kent Reptile and Amphibian Group aims to increase our understanding of toads and frogs and is looking for help from as many people as possible. All we are asking you to do is let us know if you have seen any frogs, toads or other amphibians. It doesn't matter if you see spawn, tadpoles, young animals or adults or even whether you are certain that you have identified them correctly. We would love to hear from you. Tell us about what you have seen by filling in the simple online form at [www.kentarg.org](http://www.kentarg.org)

Training events are held for those who would like to know more about Kent's amphibians and become more involved in this project. Details are on the website

Known toad  
distribution in Kent

The  
common toad  
is now a  
Biodiversity  
Action Plan  
Priority  
Species

Not online?  
Write to us and  
tell us what you  
have seen
